STEP 23 — IT CAREER DEVELOPMENT PLAN

Career Goal: Cybersecurity Professional

Career Direction

My long-term career direction is to build a career in information technology, with a particular interest in cybersecurity. After completing my BSIT degree, I plan to gain practical IT experience, improve my technical skills, and learn how to protect computer systems, networks, and data from security threats. As I gain experience, I hope to qualify for more advanced roles in cybersecurity.

Career Area	Development Plan
Target Position	Entry-Level Cybersecurity Analyst or IT Support Specialist, with the long-term goal of progressing into a specialized security role.
Target IT Field	Cybersecurity, including system protection, security monitoring, network security, vulnerability management, and incident response.
Current Skills	Basic computer skills, programming fundamentals, database concepts, troubleshooting, documentation, and familiarity with common IT tools. (Adjust this list to match your actual skills.)
Skills to Improve	Networking and TCP/IP, Linux, system administration, secure authentication, access control, scripting, threat awareness, and problem-solving.
Technologies to Learn	Linux, Wireshark, Nmap, Python, Git/GitHub, virtual machines, firewalls, security monitoring tools, and SIEM platforms.
Certifications to Consider	Begin with foundational networking and cybersecurity learning. Later, consider CompTIA Security+ or other recognized certifications based on experience and career needs.
6-Month Goal	Strengthen my networking and cybersecurity fundamentals, practice using Linux and basic security tools in legal learning labs, and complete small projects to document what I learn.
1-Year Goal	Build a portfolio of IT and security projects, seek an internship or entry-level IT opportunity, and prepare for a suitable beginner cybersecurity certification.
3-Year Professional Goal	Gain professional IT experience and work toward a cybersecurity position. Continue improving my technical skills and choose a specialization based on my interests and experience.

Personal Development Strategy

I will improve step by step by strengthening my BSIT foundation, practicing through hands-on projects, and learning from reliable courses and documentation. I will keep a portfolio of completed projects and record the skills I develop. I will also focus on ethical and responsible use of cybersecurity tools.

Career Vision

My goal is to become a skilled IT professional who can help organizations protect their systems and information. Through continuous learning, practical experience, and professional development, I hope to build a stable career and contribute to safer and more reliable technology.
